

Where to Download Source Code for GoPenServer 1.1.4

We've made this guide for users who would like to get the source code for the applications within GoPenServer. Instead providing one giant ZIP package with all of the source code you can download the source code for each application individually using the links below. GoPenServer is not responsible for any broken links that you may encounter that may prevent you from getting the source code. If you have any questions please contact us at gerfultopia@yahoo.com.

XAMPP Source Code - <http://www.apachefriends.org/en/partner-inxampp.html>

KompoZer Source Code - <http://downloads.sourceforge.net/kompozer/kompozer-077-src.tar.bz2>

Audacity Source Code - <http://audacity.sourceforge.net/download/source>

GIMP Source Code - <ftp://ftp.gimp.org/pub/gimp/v2.2/>

If you want the source code for the PHP Apps (the source code is the same is that actual application) then download the "php-apps-addon.zip" from our download pages.

If you need a program that can open common archives (ZIP, tar.gz, etc.) then we recommend the Open Source 7-Zip application, available at <http://www.7-Zip.org>.
